## **Brava Systems Unveils Brava Version 2.6.6: Delivering Enhanced AI Solutions for Commercial Real Estate**

**Houston, TX — January 15, 2025** — Brava Systems, a leader in innovative enterprise management solutions for commercial real estate, proudly announces the release of Brava 2.6.6, a transformative update to our intelligent operating platform that seamlessly enables deployment of enterprise-grade AI for any business.

At the heart of Brava 2.6.6 is a major enhancement to our Central AI Connector, designed to easily integrate advanced AI capabilities into everyday workflows. This update introduces the ability to work directly with external files using AI-powered file attachments, enabling users to analyze and interact with complex data effortlessly. The Central AI Connector supports additional methods for fetching files and streamlining access to company documents, allowing for easy document abstraction and profiling, agentic AI flows using document data, and deployment of content-understanding features.

“Brava has been delivering AI applications to its customers for many years. Now, with the rapid democratization of AI technologies and the robust new features we offer in Brava 2.6.6, we are excited to bring enterprise AI to the forefront of the CRE industry,” said Darlene Pope, CEO at Brava Systems. “This release marks a pivotal moment where AI is not an add-on feature, but a core component of our platform and our mission -- to enable smarter, faster, and more valuable real estate operations.”

In addition, the AI Chat feature has been refactored, delivering a more intuitive and conversational AI experience with features such as RAG and document processing. Previous releases already include chat features that utilize managed prompts and internal data access tools, allowing users to interact securely with a broad range of company data. With this new release, the platform supports direct integrations to cutting-edge AI providers

such as Claude, Gemini, OpenAI and Microsoft Foundry (including the newest agents), offering users a choice of powerful AI engines tailored to meet their specific needs. Brava 2.6.6 introduces added security with a robust API Key Manager, promoting secure and flexible management of AI integrations. Performance enhancements across the system, including optimized external entity handling and homepage application grid caching, ensure that Brava 2.6.6 operates with unprecedented speed and reliability. The update also automates several technical steps in launching AI solutions, allowing organizations to more easily incorporate and customize AI applications into their specific business processes and workflows.

Brava 2.6.6 is setting a new standard for AI-driven enterprise solutions for the commercial real estate and beyond. Companies ready to embrace the future of AI can look to Brava Systems as their trusted partner in innovation, providing turnkey consulting, solutions, and professional services to take your AI ambitions from vision to reality.
